EXPERIMENT

ASO Transfection and Baseline Collection

BRANCH	DATE	EXPERIMENTER
ASO	2026-09-29	Hansen Zhang

Experimental Summary

A portion of the mCherry-assay cells was first collected for pre-dose 0-hour flow cytometry. ASO was then added to the remaining cells. Baseline ORCA-arm cells were also collected for the separate RNA experiment.

Results

The mCherry baseline acquisition preceded ASO treatment, establishing the pre-dose reference for the subsequent time course.
