EXPERIMENT

Construction of the First REWIRE Pro.hA1 Mutant Panel

BRANCH	DATE	EXPERIMENTER
Apobec	2026-08-24	Yunxiang Zhang

Experimental Summary

REWIRE Pro.hA1 was used as the template for point-mutagenesis PCR with PrimeSTAR Max in 50 µL reactions for 30 cycles. Products were checked and purified from 1% agarose gels, assembled with ClonExpress C117 in 10 µL reactions at 50°C for 5 min, and transformed into DH5α cells.

Results

Bands at the expected size were excised for gel extraction, and the transformed bacteria were plated on LB agar containing 100 µg/mL ampicillin for overnight incubation.

PROTOCOL

M01: PCR (adapted)

M02: Agarose Gel Electrophoresis and Gel Extraction

M04: Homologous Recombination (adapted)

M05: Transformation & Plating (adapted)
