EXPERIMENT

Second-Round REWIRE Pro.hA1 and APOE4 Reporter Co-transfection

BRANCH	DATE	EXPERIMENTER
Apobec	2026-09-22	Yunxiang Zhang

Experimental Summary

HEK293T cells at approximately 70% confluence were co-transfected with 750 ng REWIRE Pro.hA1 mutant plasmid and 250 ng APOE4 reporter plasmid per well. Complexes were prepared in Opti-MEM with 2 µL P3000 and 2 µL Lipofectamine 3000 per well, incubated for 10-15 min, and added using the C04 workflow with these experiment-specific doses.

Results

Co-transfection was performed for the second-round editing assay. Cells were harvested 48 h later on 2026-09-24.

PROTOCOL

C04: Cell Seeding & Transfection (adapted)
