EXPERIMENT

Repeat APOE4 Western Blot with His-Tag Detection

BRANCH	DATE	EXPERIMENTER
Fundamental	2026-08-16	Xiaoyu Que and Muyin Guo

Experimental Summary

The APOE4 Western-blot assessment was repeated to include His-tag detection. The retained records include His, FLAG, total APOE and APOE4 readouts and their corresponding controls.

Results

The repeat added His-tag detection to the protein assessment. Control-lane His signal and variable beta-actin intensity limited the blots to qualitative interpretation.
