EXPERIMENT

Sequence Screening of Gfa/MRE Candidates

BRANCH	DATE	EXPERIMENTER
MRE	2026-08-15	Hansen Zhang

Experimental Summary

Four archived Gfa/MRE candidates were screened across the promoter, editor and MRE regions.

Results

The readouts later reviewed on 5 September supported the complete MRE cassette and its local junctions, while also showing a shared coding-region difference and coverage gaps. These archived candidate reads were not used to assign the identity of later transfection stocks.
