EXPERIMENT

Editor Expression after miR-124 Mimic Treatment

BRANCH	DATE	EXPERIMENTER
MRE	2026-08-29	Hansen Zhang

Experimental Summary

RNA was extracted and reverse-transcribed for the miR-124 mimic/negative-control and CMV/CMV-MRE comparison. Editor, GAPDH and ACTB were measured by qPCR in the corresponding twelve culture-well samples.

Results

Editor NTCs showed target-like amplification, and the CMV-MRE signals overlapped the contamination background. This run did not establish an MRE-specific additional effect of miR-124.

PROTOCOL

M11: SYBR Green qPCR
