EXPERIMENT

APOE4 cDNA Amplification for Gfa/MRE Sequencing

BRANCH	DATE	EXPERIMENTER
MRE	2026-09-03	Hansen Zhang

Experimental Summary

cDNA from the Gfa and MRE experiments was amplified, and gel-isolated products were prepared for Sanger sequencing.

Results

The downstream batch contained Gfa and MRE samples, with Sanger chromatograms acquired on 5 September.

PROTOCOL

M01: PCR

M02: Agarose Gel Electrophoresis and Gel Extraction
