EXPERIMENT

Reactivation of P5 and P7 Bacterial Cultures

BRANCH	DATE	EXPERIMENTER
PUF	2026-07-31	Xiaoyu Que

Experimental Summary

One millilitre of each remaining sequencing culture was transferred into 10 mL of fresh ampicillin-containing LB and incubated at 37 °C for 12-16 h.

Results

The retained cultures were restarted for plasmid preparation. On August 1, 29 plasmid preparations were obtained from the 32-member P5/P7 set.
