EXPERIMENT

Repeat Colony Screening of P5 and P7 Constructs

BRANCH	DATE	EXPERIMENTER
PUF	2026-08-04	Xiaoyu Que

Experimental Summary

Two additional colonies were picked from each selected P5 or P7 group with sequence problems and submitted for repeat sequencing.

Results

Subsequent screening accepted P5-VFN, LRD, THN, and SFE. The re-screened P7-SHE, SNE, YTH, SYR, and YYE clones lacked the deletion but carried matching substitutions at the three recognition residues in P4, consistent with additional recombination.
