EXPERIMENT

P6 and P8 Mutagenesis and Repeat Transformation

BRANCH	DATE	EXPERIMENTER
PUF	2026-08-08	Xiaoyu Que

Experimental Summary

Five P6 variants (WFH, PHQ, RGY, VFH, and WFQ) and ten P8 variants (GVD, TTE, SHE, SRE, DWE, VTF, VWF, ETD, EWD, and EWH) underwent PCR-based construction, DpnI treatment, gel purification, assembly at 50 °C for 15 min, and transformation. Additional transformations were performed for P4-SWD, THE, VWF, and EWD, and P6-VFH, PHQ, and RGY.

Results

P6-PHQ was reported as successfully obtained in this batch. No-colony outcomes led to reconstruction of P6-RGY, VFH, and WFQ and nine P8 variants on August 9.
