EXPERIMENT

Construction of the P1-P3 Mutant Batch

BRANCH	DATE	EXPERIMENTER
PUF	2026-08-30	Muyin Guo

Experimental Summary

Whole-plasmid PCR was performed on the parental PUF12 construct using the P1-P3 mutagenic primer set. PCR-positive products underwent DpnI digestion, gel assessment and recovery, overlap-mediated recircularization, DH5α transformation, and ampicillin-selective plating.

Results

The first construction batch was plated and incubated overnight. Plate inspection and the first independent sequencing submission followed on 31 August 2026.

PROTOCOL

M01: PCR

M03: Restriction Enzyme Digestion
