EXPERIMENT

Reporter Insertion into the PUF12 Backbone

BRANCH	DATE	EXPERIMENTER
Reporter	2026-08-03	Xiaoyu Que

Experimental Summary

The reporter insert and PUF12 backbone were amplified to replace the ORCA coding region. After DpnI treatment and gel extraction, 115 ng of backbone and 80 ng of insert were assembled at 50 °C for 15 min, then transformed and plated.

Results

Assembly and plating were completed using the approximately 5.6-kb backbone and 2.0-kb reporter fragments. Colonies were picked on August 4, and reporter plasmid DNA was extracted on August 5.
