EXPERIMENT

Removal of an Extra BsaI Site from the Reporter

BRANCH	DATE	EXPERIMENTER
Reporter	2026-08-08	Xiaoyu Que

Experimental Summary

The reporter construct was used as a PCR template to remove an extra BsaI site. After DpnI digestion and gel purification, the products were assembled with CE mix V3 at 50 °C for 15 min, then transformed and plated.

Results

Assembly, transformation, and plating were completed. A culture labelled Rep-ΔBsaI was grown on August 12 and used for plasmid extraction on August 13.

RELATED PROTOCOLS

M01: PCR; M02: Agarose Gel Electrophoresis and Gel Extraction; M03: Restriction Enzyme Digestion; M04: Homologous Recombination; M05: Transformation & Plating.
