EXPERIMENT

GFA/CMV-ORCA-AAV Assembly

BRANCH	DATE	EXPERIMENTER
AAV	2026-09-19	Hansen Zhang

Experimental Summary

The pAAV-MCS backbone was restriction-digested and assembled separately with GFA-ORCA and CMV-ORCA inserts by homologous recombination. The assembly products were then transformed and plated.

Results

Assembly, transformation and plating were completed for both constructs. The resulting clones were submitted for sequencing on September 20.

PROTOCOL

M03: Restriction Enzyme Digestion

M04: Homologous Recombination

M05: Transformation & Plating
