EXPERIMENT

APOE4 Amplicon PCR and Nanopore Submission for the First-Round Assay

BRANCH	DATE	EXPERIMENTER
Apobec	2026-09-03	Yunxiang Zhang

Experimental Summary

An APOE4 fragment spanning the editing site was amplified from 1.2 µL cDNA with APOE-ATG-F and APOE-TGA-R. PCR used Gloria Nova HS 2X Master Mix V2 in 25 µL reactions for 26 cycles, following the corresponding M01 workflow.

Results

PCR products were submitted to CWBIO for reference-based nanopore amplicon sequencing. Sequencing results returned on 2026-09-06.

PROTOCOL

M01: PCR
