EXPERIMENT

Construction of the Second REWIRE Pro.hA1 Mutant Panel

BRANCH	DATE	EXPERIMENTER
Apobec	2026-09-15	Yunxiang Zhang

Experimental Summary

Point-mutagenesis PCR products were checked on agarose gels, excised, purified, and eluted in 12 µL. ClonExpress C117 recombination was performed in 10 µL reactions with 5 µL 2× CE Mix V3 at 50°C for 5 min, followed by DH5α transformation using the documented experiment-specific conditions.

Results

The construction workflow proceeded through gel recovery, recombination and transformation. Transformed bacteria were plated on LB agar containing 100 µg/mL ampicillin and incubated overnight at 37°C.

PROTOCOL

M01: PCR (adapted)

M02: Agarose Gel Electrophoresis and Gel Extraction

M04: Homologous Recombination (adapted)

M05: Transformation & Plating (adapted)
