EXPERIMENT

A-beta Exposure and Sample Collection from CCF-STTG1 Cells

BRANCH	DATE	EXPERIMENTER
FV	2026-10-02	Hansen Zhang

Experimental Summary

Electroporated CCF-STTG1 cells were exposed to A-beta for 6 hours. Culture supernatants were collected first for the later ELISA, followed by cell collection for RNA analysis.

Results

Supernatant and RNA-analysis cell samples were collected from the functional-validation cultures in that order.
