EXPERIMENT

Successful Western Blot of the Initial 10R Comparison

BRANCH	DATE	EXPERIMENTER
Fundamental	2026-06-28	Xiaoyu Que and Muyin Guo

Experimental Summary

The initial Western blot examined the 10R, PUF-only (PO), APOBEC-only (AO) and empty-vector (EV) groups. FLAG signals were assessed with beta-actin as the loading control.

Results

The initial four-group Western blot succeeded on the first attempt and supplied qualitative protein-expression evidence.
