EXPERIMENT

Endogenous miRNA Detection by Stem-Loop RT-qPCR

BRANCH	DATE	EXPERIMENTER
MRE	2026-08-14	Hansen Zhang

Experimental Summary

RNA from SH-SY5Y and U251 cells was analyzed by stem-loop RT-qPCR following the M0D2 protocol. The 10 µL qPCR reactions tested miR-124-3p, miR-137-3p and miR-126-3p, with U6 as the reference assay and dilution-series, no-RT and no-template controls.

Results

> The miRNA assays showed late or absent amplification, and U6 also amplified late. This run did not provide reliable quantitative evidence for differences in endogenous miRNA abundance between the two cell lines.

PROTOCOL

M0D2 miRNA stem-loop RT-qPCR, protocol-5
