EXPERIMENT

APOE4 cDNA PCR for the First Gfa/MRE Comparison

BRANCH	DATE	EXPERIMENTER
MRE	2026-08-22	Hansen Zhang

Experimental Summary

APOE4 cDNA from the first Gfa/MRE cell-assay batch was amplified for sequencing. The HEK293T products were linked to the TE, TC, TM and TG readouts inspected on 23 August.

Results

APOE4 amplicons were prepared for sequencing. Original submission labels were retained for the subsequent chromatogram analysis.

PROTOCOL

M01: PCR
