EXPERIMENT

Construction of the P4 and P6 Mutant Panel

BRANCH	DATE	EXPERIMENTER
PUF	2026-08-07	Xiaoyu Que

Experimental Summary

Ten P4 variants (ETD, EWH, SGD, SHE, SNE, VTF, EWD, THE, SWD, and VWF) and five P6 variants (MHQ, TRQ, QFW, QRW, and WFD) were processed by PCR, DpnI digestion, gel purification, assembly at 50 °C for 15 min, transformation, and plating.

Results

P4-SWD, THE, VWF, and EWD were taken forward for repeat transformation on August 8 after no-colony outcomes. Follow-up screening reported additional P7 alterations in P4-SGD/EWD and identified the sample labelled P4-THE as P5-SYQ; the five P6 constructs were reported as successfully obtained in the August 8 entry.
