EXPERIMENT

Selection of Sequence-Verified PUF12 Mutants

BRANCH	DATE	EXPERIMENTER
PUF	2026-09-05	Muyin Guo

Experimental Summary

Sanger-screened candidates were selected by checking the intended triplet substitutions, preserved reading frame, and sequence agreement within the high-quality read coverage.

Results

A cumulative total of 51 mutant plasmids was reported as passing sequence screening across the three construction batches. The accepted constructs were selected for subsequent plasmid preparation.

PROTOCOL

M06: Colony Picking & Bacterial Culture
