EXPERIMENT

Construction of the mCherry-Only Reporter

BRANCH	DATE	EXPERIMENTER
Reporter	2026-09-13	Hansen Zhang

Experimental Summary

The mCherry-only reporter was constructed by PCR and homologous recombination, followed by bacterial plating, to provide a reporter for electroporation testing.

Results

Two candidate clones generated Sanger chromatograms on 15 September; the mCherry-only reporter was subsequently used in the CCF-STTG1 voltage screen.

PROTOCOL

M01: PCR

M04: Homologous Recombination

M05: Transformation & Plating
