EXPERIMENT

# Flow Cytometry of BFP Editor and RepOpen Samples

| BRANCH | DATE | EXPERIMENTER |
| --- | --- | --- |
| Reporter | 2026-09-17 | Hansen Zhang |

## Experimental Summary

The BFP-editor and RepOpen comparison was measured by flow cytometry, including the corresponding original-editor and empty-vector comparisons in the archived dataset.

## Results

The WT reporter showed fewer high-EGFP events with the BFP-linked editor than with the original editor. Differences in the reporter-positive populations limited direct interpretation as an editing-activity difference.
